		<b>Version</b> <b>2.0</b>

## 1. Introduction

This deliverable presents the second version of the Data Management Plan (DMP) for the TERAIS project and provides an analysis of the data management policy applied by the Partners to datasets generated within the project as well as other data related to organisation of the events envisioned within the project. In particular, the DMP identifies the main datasets and describes research data management during the project, as well as how and what parts of the datasets will be openly shared, will be made accessible for verification and re-use, and will be curated and preserved. The goal of this DMP is to facilitate effective internal data management and make data FAIR (Findable, Accessible, Interoperable, and Reusable).

This document provides guidance to the project partners on data management and it is a useful tool to agree on data processing, facilitate the creation of a common understanding and, where possible, common practices. This deliverable is submitted to the European Commission at M6 (31/03/2023) and represents a preliminary plan. The DMP is, in fact, a living document and it will be updated and further refined with the TERAIS project's progress. It is also important to remark that this DMP reflects the provisions established by the project contracts and complements the planned project exploitation, dissemination and IPR procedures.

## 2. DMP management and update

The document's first development and future updates mainly rely on the collection of information about datasets filled out by each project partner responsible for producing such data (see Section 3.2). The form used to collect this information (i.e., Dataset Questionnaire Form, DQF) has been prepared and is constantly updated by UKBA, UHAM and IIT Offices involved in this process under the supervision of Daniela Olejarova as the TERAIS Project Manager assigned with responsibility of overall coordination in this area. Section 3.2 provides extensive information on several features of datasets, grouping them into 6 main datasets (hereinafter called parent-datasets). Annex 1 lists datasets produced in specific studies (hereinafter called child-dataset)<sup>1</sup>. The latter inherit the characteristics of parent-datasets they are related to, as described in Section 3.2.

The DMP deliverable, including an editable copy and the DQFs, will be available to all partners on **the project shared drive** (UKBA institutional Google drive). The document will be updated as appropriate along the project duration. The different versions will be numbered and dated for identification. Official versions in a pdf format will be stored on the **TERAIS project website (www.terais.eu)**. Should a new dataset be identified along the project implementation, partners will submit a new form containing the new identified dataset and will notify the coordinator. UKBA will then be in charge of updating the document and its annexes and notifying the Consortium through the project mailing list system. In case new child-datasets are added without modifying the parent-datasets, the submission of the updated version of the DMP will apply only to Annex 1.

---

<sup>1</sup> We distinguish between parent- and child-datasets to avoid excessive repetitions while describing the datasets. The terms "child" and "parent" in this case do not refer to the age of participants. They are used to describe the hierarchical relationship between general types of datasets (parent-) and study-specific ones (child-). In particular, the characteristics of parent-datasets, described below in detail, are inherited by the child-datasets listed in Annex 1.

	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

### 3. Data summary

#### 3.1 TERAIS datasets

The current version of the TERAIS DMP is based on the description of six datasets, of which key details are summarised in the following table (Table 1).

Majority of the identified datasets are expected to have long-term value. Datasets shall be useful to several categories of research communities, and users from research, industry, and society, including:

##### **Research and scientific community**

- Robotics & AI
- Social & Cognitive Robotics
- Human-Robot Interaction & Human-Computer Interaction
- Social & Developmental Psychology
- Cognitive & Neuroscience

##### **Industry**

- Development of Co-bots
- Machine Learning algorithms for autonomous robots
- User Experience Design of technological devices
- Computer Vision applications

##### **Society**

- Specific beneficiary categories of Social Robots and Interactive Technologies (examples from literature: elderly, children with developmental disorders, children with learning disorders)
- Increased and safer employment of robots in social institutions

Within these contexts, datasets may have several re-uses in novel similar research studies. Detailed expected utility for each child-dataset to be generated is reported in Annex 1 - Table 1.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	Deliverable Number <b>D6.4</b>
		Version <b>2.0</b>

**Table 1. Summary of the TERAIS research datasets generated in WP3**

DATASET NAME	PARTNER	ORIGIN	TYPE	ACCESSIBILITY <sup>2</sup>
<b>DATASET 1: TERAIS_UKBA_Dataset_ExperimentalData</b>	UKBA	Generated within the project	<b>Quantitative tabular data</b> <b>Quantitative and textual data</b> <b>Digital image data</b> <b>Digital audio data</b> <b>Digital video data</b> <b>Documentation and scripts</b>	Confidential to partner before publication  Open access after publication
<b>DATASET 2: TERAIS_UKBA_Dataset_Code</b>	UKBA	Generated within the project	<b>Code and scripts</b> - The data will be produced by project participants who will write code. It will be organised using the git versioning system. The code will be written in specific languages such as Python or C++ and follow common standards for the relevant languages.	Confidential to partner before publication  Open access after publication
<b>DATASET 3: TERAIS_Dataset_IIT_ExperimentalData</b>	IIT	Generated within the project	<b>Quantitative tabular data</b> <b>Quantitative and textual data</b> <b>Digital image data</b> <b>Digital audio data</b> <b>Digital video data</b> <b>Documentation and scripts</b>	Confidential to partners before publication  Open access after publication
<b>DATASET 4: TERAIS_Dataset_IIT_Code</b>	IIT	Generated within the project	<b>Code and scripts</b> - The data will be produced by project participants who will write code. It will be organised using the git versioning system. The code will be written in specific languages such as Python or C++ and follow common standards for the relevant languages.	Confidential to partners before publication  Open access after publication
<b>DATASET 5: TERAIS_Dataset_UHAM_ExperimentalData</b>	UHAM	Generated within the project	Quantitative tabular data Quantitative and textual data Digital image data Digital audio data Digital video data Documentation and scripts	Confidential to partners before publication  Open access after publication
<b>DATASET 6: TERAIS_Dataset_UHAM_Code</b>	UHAM	Generated within the project	Codes and scripts produced by TERAIS staff for core TERAIS research, using common programming languages like Python and following common programming standards. The code will be organised using the git versioning system.	Confidential to partners before publication  Open access after publication

<sup>2</sup> In case of patenting or potential commercial exploitation, different levels of confidentiality can be foreseen (in case of Collaborative Projects):

- **Beneficiary institution access:** The disclosure of information is not provided at any level and/or any time. This option is applied when, regardless of the long-term value and scope for wider use, the dataset contains data that would lose their value if disclosed (e.g. experimental results and validation). The beneficiary who chooses to protect this information from any external access aims at patenting/exploiting it or at protecting trade secrets and must ensure confidentiality beyond the clauses agreed in the Consortium Agreement;
- **Confidential to partner:** This option is applied when, regardless of the long-term value and scope for wider use, the dataset contains personal data that cannot be protected once disclosed. These may include among others videos and images collected during the project tests;
- **Confidential to Consortium including EC services (Consortium only):** This option is applied for data containing confidential information (e.g. exploitable results) requiring IP protection, aimed at possible exploitation. In certain cases to be defined along with the development of the project, the owners may allow Open Access upon dissemination of the associated results in peer-reviewed scientific publications;
- **Open Access:** This option is applied when data has no IP restrictions and will be openly available and re-usable.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

### 3.2. Extended TERAIS datasets' information

**Table 2. Presentation of the extended information on the TERAIS datasets 1 - 2**

DATA SUMMARY	DATASET 1	DATASET 2
<b>Main dataset (name)</b>	TERAIS_UKBA_Dataset_ExperimentalData	TERAIS_UKBA_Dataset_Code
<b>Sub-dataset (name)</b>	Empirical Research Dataset	Code Dataset
<b>Responsible partner</b>	UKBA	UKBA
<b>Other partners involved</b>		
<b>Goal</b>	This Dataset will be used for Work Package 3 (Achievement of Scientific Excellence) see Grant Agreement - Annex 1, Part B, par. 1.2.4 "Supporting scientific excellence and international collaboration - RESEARCH and NETWORKING".	This Dataset will be used for Work Package 3 (Achievement of Scientific Excellence) see Grant Agreement - Annex 1, Part B, par. 1.2.4 "Supporting scientific excellence and international collaboration - RESEARCH and NETWORKING".
<b>Data origin</b>	Generated within the project <i>Please justify below the need of new data to be generated</i>	<i>Generated within the project</i> <i>Please justify below the need of new data to be generated</i>
	Achieving scientific excellence is a core objective of the project. To this aim, it is crucial for research to grow and progress, based on the acquisition of novel empirical data that, in the case of this project, would be necessary to investigate humans in HRI scenarios and develop human-aware, explainable, and trustworthy robots.	Achieving scientific excellence is a core objective of the project. To this aim, it is crucial for research to grow and progress, based on the acquisition of novel empirical data that, in the case of this project would be necessary to investigate humans in HRI scenarios and develop human-aware, explainable, and trustworthy robots
<b>Data collection</b>	The dataset will contain various types of sensor data including images, videos, sound recordings, depth data, motion capture data. Sensor data will be produced using both proprietary or non-proprietary software based on the relevant hardware (e.g. Tobii: Tobii-Pro Lab, Shimmer, Optitrack, OptoForce, EyeLink Sr-Research, Pupil Core, LeapMotion, IntelRealSense), or through applications developed ad hoc (e.g., Python or Matlab libraries to interface with device and collect data in real-time, such as reaction time). The dataset will also contain questionnaires given to participants which will be collected through proprietary software for collecting questionnaire data (e.g. Survey Monkey). The dataset will also contain analysis of other data contained within the dataset or other forms of derived data. Such data may be produced via statistical analysis conducted with software such as R and Jamovi. Sensor data might be processed by proprietary or non-proprietary software or software	The data will be produced by project participants who will write code. It will be organised using the git versioning system. The code will be written in specific languages such as Python or C++ and follow common standards for the relevant languages.

		<b>Version</b> <b>2.0</b>

DATA SUMMARY	DATASET 1	DATASET 2
	developed within the project (e.g. estimation of human pose from images, transcription of recorded voice).	
<b>Dataset type</b>	<i>Other</i>	<i>Tools</i>
	<b>Raw experimental data and Results/Analysed Data</b>	<b>Code</b>
<b>File formats</b>	<p>Non-proprietary formats will be preferred for data saving and data storage. For instance:</p> <ul style="list-style-type: none"> <li>Quantitative tabular data: .csv, .txt, .omv</li> <li>Qualitative and textual data: .xml, .txt, .json, .docx, .rtf</li> <li>Digital image data: .tif, .jpg, .pdf, .bmp, .png</li> <li>Digital audio data: .wav, .mp3</li> <li>Digital video data: .mp4, .ogv</li> <li>Documentation and scripts: .txt, .htm, .pdf</li> </ul> <p>According to other proprietary software used for the analysis other formats might be .m, or in case other open-source formats will not be available, proprietary formats of devices used for data collection.</p>	<p>Most files will be stored in standard files containing text with relevant extensions for code and scripts (.py, .c, .h, .cpp, .hpp, .sh, .bat). Some configuration files may be stored as .json, .csv or .xml files or other human readable formats. Other data might be stored in text files such as .txt, .md. Documentation might be stored in .pdf or .html format. Some code might be stored in the form of compiled binary files.</p>
<b>Expected volume of data</b>	<b>maximum 2 TB</b>	<b>100 MB</b>
<b>Expected time of release</b>	We will release parts of the dataset in individual repositories upon publication of papers that reference it. We may postpone the release of some parts of the datasets until all of the papers relevant for a given study are published.	We will release parts of the developed codebase in individual repositories upon publication of papers that reference it. We will also release code in cases where it would be beneficial for users of our other published datasets as a tool to facilitate a better use of the published datasets. We may postpone the release of some parts of the code until all of the papers relevant for a given study are finished.
DOCUMENTATION AND DATA QUALITY		
<b>Metadata and documentation</b>	<p>Beyond giving as much information as possible in published papers to ensure reproducibility of the studies, metadata will be incorporated into the dataset to help others identify, discover, and reuse data.</p> <p>The DCMI standards or similar will be used for documentation with respect to the following aspects: title, abstract, description, access right, creator, audience, availability, bibliographic citation, contributors, format, identifier.</p> <ul style="list-style-type: none"> <li>Data will be organised in folders, one for each single experiment referred to the dataset.</li> </ul> <p>According to the experiment, the access to data could be restricted, shared, or made open.</p> <ul style="list-style-type: none"> <li>Data will be divided into raw data and analysed data. According to the experiment and the nature of data, only analysed data might be made accessible.</li> <li>Data will be divided in folders according to their nature and format.</li> </ul>	<p>We will use the git versioning system, which keeps track of the metadata for the repository. Codebase documentation will also be provided for the scientific community to be able to utilise the code for their own research. When released the code will be hosted in public git repositories either hosted on third-party services such as GitHub or on GitLab servers hosted by one of the participating institutions.</p>

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

DATA SUMMARY	DATASET 1	DATASET 2
	<ul style="list-style-type: none"> <li>• Readme text and, if possible, graphic representation of the dataset will be released.</li> <li>• Links to papers or additional materials explaining the procedure of the study will be provided.</li> </ul>	
<b>Keywords</b>	Human-Robot Interaction; Human-awareness; Trust; Explainability; Cognitive Robotics; Social Robotics	Human-Robot Interaction; Human-awareness; Trust; Explainability; Cognitive Robotics; Social Robotics
<b>Data quality</b>	Experiments will be conducted based on previous experience with experimental settings and data collection, as well as pilot and preliminary data analysis. Questionnaires and experimental stimuli will be piloted using cognitive interviews with participants in order to ensure validity and reliability of the measures. When possible, video or image data will be recorded by more cameras (e.g. external cameras, robot's cameras). Human gaze and kinematic data will be recorded after previous calibration.	Code will be verified by its execution on relevant hardware. Code segments may be reviewed by multiple people. Some of the functionality might be verified using unit tests.
STORAGE AND BACKUP DURING THE RESEARCH PROCESS		
<b>Storage and backup solutions</b>	Data will be stored and backed-up in the institutional storage system hosted at UKBA, which will utilise the RAID storage system to ensure redundancy. Data will also be backed up to the institutional OneDrive cloud storage or institutional Google Drive storage. Data that will be shared for future reuse by other researchers will be uploaded on open science repositories such as Zenodo or OSF.	The git versioning system supports the codebase to be stored both in remote storage (GitLab, GitHub) and locally on the devices used by researchers. The GitHub remote storage is hosted by a third-party which ensures data security. GitLab remote storage will be hosted by UKBA on a server with RAID storage system which will provide data redundancy.
<b>Data security and protection</b>	Data will be processed with a secure LAN network. Every system will be accessible only via authentication with credentials assigned to every person responsible for data processing. All systems will be monitored. Data will be protected following the technical and organisational safety measures to ensure protection from unauthorised access, data theft and/or data leakage. For this reason, data will be encrypted to be unreadable in case of data breach.	The codebase will not contain sensitive data therefore we will use standard practices. The private repositories will be accessible by researchers working on the project via their account protected with passwords or authorization tokens/keys. The public repositories will be visible to anyone, but only researchers working on the project will have the ability to modify them in the same manner as described for private repositories.
LEGAL AND ETHICAL REQUIREMENTS, CODES OF CONDUCT		
<b>Personal/special categories of data</b>	YES	NO
<b>Protection of personal/special categories of data</b>	According to the provisions of the General Data Protection Regulation (GDPR), article 6 par. 1 point a), personal data of participants will be processed only after receiving their signed informed consent. As Data Controller, UKBA implements technical and organisational measures to ensure the correct Data security, in line with Articles 25 and 32 of GDPR above mentioned. Personal Data will be pseudonymized and stored in a repository system provided by UKBA. The mapping table linking the participant's ID information to corresponding codes	No personal or sensitive data will be included in this dataset.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

DATA SUMMARY	DATASET 1	DATASET 2
<b>Ethical issues (research data involving experiments with humans)</b>	<p>will be stored in a different and encrypted repository system, accessible only to the researcher in charge of the study. Thereby, all data collected during the experiment for each participant will be processed in connection with the code assigned to participants rather than with their ID information. Personal Data will not be kept any longer than the time necessary for the objective they had been processed for (see Article 5, par. 1, point e) of GDPR). Access to the data will be provided only to project collaborators involved in the specific study and students collaborating in the study (under the researchers' supervision).</p> <p><b>YES</b></p> <p>No minors will take part in the studies. Participants will be recruited by standard recruitment procedures, including word of mouth, social networks, and students. According to the provisions of the General Data Protection Regulation (GDPR), article 6 par. 1 point a), personal data of participants will be processed only after receiving their signed informed consent. As Data Controller, UKBA implements technical and organisational measures to ensure the correct Data security, in line with Articles 25 and 32 of GDPR above mentioned. After the participant signs the documents of informed consent and privacy, the documents will be stored in an institutional storage system. These documents will be accessible to project collaborators involved in the specific study. UKBA personnel involved in the project received specific training about personal data management, with particular attention to Data Security and Protection. Personal Data will be pseudonymized and stored in a repository system provided by UKBA. All the Data related to the study must be kept stored for a minimum of 10 years after the regular or anticipated conclusion of the study. The mapping table linking the participant's ID information to corresponding codes will be stored in a different and encrypted repository system, accessible only to the researcher in charge of the study. Thereby, all data collected during the experiment for each participant will be processed in connection with the code assigned to participants rather than with their ID information. Data related to the Study will be disseminated only in a strictly anonymous form. Dissemination may take place, for example, in scientific journals, as well as at scientific conferences/events/seminars exclusively for scientific, popular and/or institutional purposes. In any case, the names of participants in the Study will not be disclosed. The data of participants in the Study, therefore, may only be presented in aggregate form. The studies will follow the national and international codes of conducts and institutional ethical guidelines, including the American Psychological Association guidelines and be reviewed by the UKBA ethical committee. Personal Data will not be kept any longer than the time necessary for the objective they had been processed for (see Article 5, par. 1, point e) of GDPR). The UKBA Data Protection Officer is available at the following e-mail address: <a href="mailto:dpo@uniba.sk">dpo@uniba.sk</a> or the post address: Univerzita Komenského v Bratislave, Centrum informačných technológií UK, Šafárikovo námestie 6, P.O. Box 440, 814 99 Bratislava.</p>	<p><b>NO</b></p> <p>No human subjects' data will be included in this dataset.</p>

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

DATA SUMMARY	DATASET 1	DATASET 2
<b>Other ethical issues (e.g. involving animal subjects)</b>	<i>NO</i> No data from animal subjects will be included in this dataset.	<i>NO</i> No data from animal subjects will be included in this dataset.
<b>Intellectual property rights</b>	Members of the research team from all participating institutions involved in the specific studies will have the ability to restrict or grant data access to others. Some parts of datasets will be made available for the public under the open science principles on the open science repository upon the publication of manuscripts relevant to the data.	The repositories will be owned by a group on the GitLab server or on GitHub. The group will consist of members of the research team from all participating institutions who will have the ability to restrict or grant access to a given repository to others.
DATA SHARING AND LONG-TERM PRESERVATION		
<b>Data sharing</b>	Specific datasets that will be made available under the open science principles will be uploaded on open science repositories, which will provide a persistent identifier and ensure discoverability by using specific keywords relevant to the dataset, or searching for the specific project. Datasets will also be referenced in respective publications or conference talks and may be reused by other researchers.	The repositories which were available under the open science principles will remain public and be accessible to everyone. The released code will be accessible using git-based tools or via a browser by visiting a public url. Links to relevant repositories will be included in the published papers and in conference presentations. We will also share links to repositories on public platforms (e.g. PapersWithCode.com) and social media. The repositories will be findable using common search engines. Code might also be provided to third-parties upon request when necessary for peer-review or follow-up work even before it is made accessible to everyone.
<b>Data repository</b>	<b>Institutional or Zenodo</b>	<b>Institutional or Zenodo</b> <b>GitHub</b> <a href="https://github.com">https://github.com</a>
<b>Restrictions on sharing</b>	Data collected from human participants will be treated in compliance with the ethical protocol for user studies. Personal data (images/videos/audios revealing participants' faces and voices) will be released to other research institution only anonymised and under signed agreement. Pseudoanonymised data that cannot be connected in any way to human participants will be deposited and made open for scientific purposes in trusted data repositories. If ethical protocol allows, also under CC BY license. Collaboration with the private sector may prohibit the open-access publication of code/datasets. In such cases, the availability is subject to NDA and will be specified on a per-study basis.	Anyone will be able to use the data shared in public repositories for non-profit research and educational activities. Collaboration with the private sector may prohibit the open-access publication of code/datasets. In such cases, the availability is subject to NDA and will be specified on a per-study basis..
<b>Data curation</b>	In accordance with the GDPR, personal data shall be stored in an encrypted storage for a period of no more than 5 years.	No data will be destroyed. Earlier versions of the codebased will be accessible via the git versioning system.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

DATA SUMMARY	DATASET 1	DATASET 2
<b>Requirements for reusability</b>	We will prioritise the use of non-proprietary data formats which could be accessed using non-proprietary tools. Some of the published data may require proprietary software, mostly related to the hardware used. We may also provide some software tools to work with the published data (see dataset Code).	Use of the git versioning software is recommended to access shared code, but is not required. In order to run the code publicly available compilers and interpreters will be required along with publicly available libraries. Some parts of the code may require proprietary software such as Matlab.
<b>Licensing</b>	<i>Personal Data (not fully anonymized): Access Restricted</i> <i>Anonymized Data collected from Human Participants: CC BY-NC-ND only for scientific purposes</i> <i>Other Experimental Data: CC BY</i> <i>Metadata: CC 0</i>	<i>Code GNU GPLv3 or MIT License</i> , depending on the specific dataset we will release <i>Metadata CC 0</i>
DATA MANAGEMENT RESPONSIBILITIES AND RESOURCES		
<b>Roles and responsibilities</b>	Data management of this subset will be the responsibility of Xenia Daniela Poslon (xenia.poslon@fmph.uniba.sk)	Data management of the codebase will be the responsibility of Viktor Kocur (viktor.kocur@fmph.uniba.sk)
<b>Resourcing</b>

In any case, data will be released one year after the end of the project, to ensure having time for publishing results on such data.
<b>DOCUMENTATION AND DATA QUALITY</b>		

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

DATA SUMMARY	DATASET 3	DATASET 4
<b>Metadata and documentation</b>	<p>Beyond giving as much information as possible in published papers to ensure reproducibility of the studies, metadata will be incorporated into the dataset to help others identify, discover, and reuse data.</p> <p>DCMI, Datacite, DDI standards or similar will be used for documentation. Dataverse ensures exporting metadata and data schema in several formats.</p> <ul style="list-style-type: none"> <li>• Data will be organised in folders, one for each single experiment referred to the dataset.</li> </ul> <p>According to the experiment, the access to data could be restricted, shared, or made open.</p> <ul style="list-style-type: none"> <li>• Data will be divided into raw data and analysed data. According to the experiment and the nature of data, only analysed data might be made accessible.</li> <li>• Data will be divided in folders according to their nature and format.</li> <li>• Readme text and, if possible, graphic representation of the dataset will be released.</li> <li>• Links to papers or additional materials explaining the procedure of the study will be provided.</li> </ul>	<p>Beyond giving as much information as possible in published papers to ensure reproducibility of the studies, metadata will be incorporated into the dataset to help others identify, discover, and reuse data.</p> <p>We will use the git versioning system, which keeps track of the metadata for the repository. When released, the code will be hosted in public git repositories in our institutional GitLab server.</p> <ul style="list-style-type: none"> <li>• Data will be divided in folders according to their nature and format.</li> <li>• Readme text and, if possible, graphic representation of the dataset will be released</li> <li>• Links to papers or additional materials explaining the procedure of the study will be provided</li> </ul>
<b>Keywords</b>	Human-Robot Interaction; Human-awareness; Trust; Explainability; Cognitive Robotics; Social Robotics. According to the type of dataset and research, tools such as MeSH on Demand will be used to ensure the findability of the dataset.	Human-Robot Interaction; Human-awareness; Trust; Explainability; Cognitive Robotics; Social Robotics. Once a new dataset will be created, specific keywords for that dataset will be provided. According to the type of dataset and research, tools such as MeSH on Demand will be used to ensure the findability of the dataset.
<b>Data quality</b>	Experiments will be conducted based on previous pilot studies exploring problems in experimental settings and data collection, and early data analysis. When possible, video or image data will be recorded by more cameras (e.g. external cameras, robot's cameras). Human gaze and kinematic data will be recorded after previous calibration.	Codes will be stored in datasets only after accurate control of correct running, storing data and safety for human participants (robot's code) both in pilot studies and experiments.
<b>STORAGE AND BACKUP DURING THE RESEARCH PROCESS</b>		
<b>Storage and backup solutions</b>	Computer data and configuration will be backed-up on an encrypted external storage system at least every week and software installed on computers will be updated regularly. Data will be tested regularly to ensure their usability in case of necessity.	Computer data and configuration will be backed-up on an encrypted external storage system at least every week and software installed on computers will be updated regularly. Data will be tested regularly to ensure their usability in case of necessity.
<b>Data security and protection</b>	Data will be processed with a secure LAN network. Every system will be accessible only via authentication with credentials assigned to every person responsible for data processing. Passwords will consist of at least 8 characters and will be modified by the person on first use and at least every three months. All systems will be monitored. Data will be protected following the technical and organisational safety measures to ensure protection from unauthorised access, data theft and/or data leakage. For this reason, data will be encrypted to be unreadable in case of data breach.	Data will be processed with a secure LAN network. 		ensure protection from unauthorised access, data theft and/or data leakage. For this reason, data will be encrypted to be unreadable in case of data breach.
LEGAL AND ETHICAL REQUIREMENTS, CODES OF CONDUCT		
<b>Personal/special categories of data</b>	YES	NO
<b>Protection of personal/special categories of data</b>	<p>IIT complies with Regulation n. 679/2016 with subsequent amendments (hereafter “GDPR”). For the studies carried out in Genova, IIT is the Data Controller of participants’ personal data. In this role, IIT determines the purposes and methods of Data management and adopts the technical and organisational security measures described below to ensure that the Data Management is carried out in compliance with GDPR. These measures are re-examined and updated when necessary.</p> <p>As Data Controller, the Italian Institute of Technology (IIT) implements technical and organisational measures to ensure the correct Data security, in line with Articles 25 and 32 of GDPR above mentioned.</p> <p>After the participant signs the documents of informed consent and privacy, the documents will be stored in a secure archive via Enrico Meloni 83, IIT, Genova. Such documents will be accessible to the Principal Investigator and to specifically authorised IIT personnel.</p> <p>The principal investigator and the research team are responsible for research data within the whole cycle: collection, processing, transferring and storing. In every phase, the principal investigator and the research team will ensure the correct application of technical and organisational security measures for data management.</p> <p>The Principal Investigator and the authorised personnel received specific training about personal data management within IIT, with particular attention to Data Security and Protection.</p> <p>Personal Data will be pseudonymized, encrypted, and stored in a repository system provided by IIT. The mapping table linking the participant’s ID information to corresponding codes will be stored in a different and encrypted repository system, accessible only to experimenters. Thereby, all data collected during the experiment for each participant will be processed in connection with the code assigned to participants rather than with their ID information. In case anonymization is possible, it will be preferred to pseudonymization for data sharing. Complete anonymization will be also preferred to pseudonymization for data storage in case no relevant information will be lost.</p> <p>Personal Data will not be kept any longer than the time necessary for the objective they had been processed for (see Article 5, par. 1, point e) of GDPR). access procedure for authorised</p>	No human subjects' data will be included in this dataset.

DATA SUMMARY	DATASET 3	DATASET 4
	persons to process personal data.	
<b>Ethical issues issues (research data involving experiments with humans)</b>	<b>YES</b> Participants will be recruited with a recruiting email sent to a local mailing list to which they previously subscribed. According to the provisions of the General Data Protection Regulation (GDPR), article 6 par. 1 point a), personal data of participants will be processed only after receiving their signed informed consent. Participants will be informed about the nature of the study and the procedure for data collection and management. They will be explicitly asked for authorization to collect and store data and to share data for scientific, dissemination, and institutional purposes in an anonymized form. Participants will be also explicitly asked for authorization to record video during experimental sessions that could be shared for scientific, dissemination, and institutional purposes without connecting them to ID information. For what concerns the attribution of tasks and duties to authorised subjects, the internal staff managing personal data is designated with the instrument of appointment. Communication of written instructions are given to internal staff authorised for personal data management. A channel for the communication of possible violations of obligations about Personal Data Management is available. Measures of de-identification of personal data are applied so that data cannot be ascribed to a specific participant without using additional information. The IIT Data Protection Officer is available at the following e-mail address: dpo@iit.it. With respect to the type of studies and participants planned within the projects the Data Protection Impact Assessment (DPIA) was not evaluated as necessary. An evaluation from the DPO will be provided if requested. All the experiments will be carried out in line with national and international codes of conducts and institutional ethical guidelines. Specifically, they will follow ethical protocols approved by the regional ethical committee “Comitato Etico Regione Liguria”.	<b>NO</b> No human subjects' data will be included in this dataset.
	<b>Other ethical issues (e.g. involving animal subjects)</b>	<b>NO</b> No data from animal subjects will be included in this dataset.
<b>Intellectual property rights</b>	As written in the Grant Agreement, "results are owned by the beneficiaries that generate them. However, two or more beneficiaries own results jointly if: I) they have jointly generated them and II) it is not possible to: a) establish the respective contribution of each beneficiary, or b) separate them for the purpose of applying for, obtaining, or maintaining their protection. The joint owners must agree — in writing — on the allocation and terms of the exercise of their joint ownership ('joint ownership agreement'), to ensure compliance with their obligations under this Agreement." DATA SUMMARY	DATASET 5	DATASET 6
	.mp4, .ogv .txt, .htm, .pdf However, in some cases open-source formats might not be available and some other additional formats might be necessary.	
<b>Expected volume of data</b>	<b>maximum 2 TB</b>	<b>100 MB</b>
<b>Expected time of release</b>	We will release parts of the dataset in individual repositories upon publication of papers that reference it. We may postpone the release of some parts of the datasets until all of the papers relevant for a given study are published.	We will release parts of the dataset in individual repositories upon publication of papers that reference it. We may postpone the release of some parts of the datasets until all of the papers relevant for a given study are published.
DOCUMENTATION AND DATA QUALITY		
<b>Metadata and documentation</b>	Beyond giving as much information as possible in published papers to ensure reproducibility of the studies, metadata will be incorporated into the dataset to help others identify, discover, and reuse data.  We will use standard formats for metadata like DCC, DCMI, Datacite, DDI standards or similar for documentation. Additionally, we will organise the data as follows: <ul style="list-style-type: none"> <li>• Data will be organised in folders, one for each single experiment referred to the dataset. According to the experiment, the access to data could be restricted, shared, or made open.</li> <li>• Data will be divided into raw data and analysed data. According to the experiment and the nature of data, only analysed data might be made accessible.</li> <li>• Data will be divided in folders according to their nature and format.</li> <li>• Readme text and, if possible, graphic representation of the dataset will be released.</li> <li>• Links to papers or additional materials explaining the procedure of the study will be provided.</li> </ul>	We will use a versioning system which keeps track of all changes in the history and metadata. Also, we will provide documentations and textual instructions, ex: a readme file, to support wide accessibility, portability, and reproducibility. When released, the code will be hosted in public git repositories or in our institutional repository.
<b>Keywords</b>	Human-awareness; Trust; Explainability; Cognitive Robotics; Social Robotics; Intention Understanding Additional specific keywords will be decided based on individual papers, such as: Python, PyTorch, Deep Learning, Transformers, Classification	Human-awareness; Trust; Explainability; Cognitive Robotics; Social Robotics; Intention Understanding Additional specific keywords will be decided based on individual papers, such as: Python, PyTorch, Deep Learning, Transformers, Classification
<b>Data quality</b>	Experiments will be conducted based on previous pilot studies to specify the experimental settings and metaparameter, data collection, and early data analysis.	All code is tested on its native hardware and possibly across multiple machines. Additionally, code is reviewed by other researchers. Code segments specific to the robot are tested in a simulated environment before migrating to the physical robot.

		Version 2.0

## 4. FAIR data

### 4.1. Making data findable, including provisions for metadata

In order to make each public dataset findable and citable, a Digital Object Identifier (DOI) will be assigned to each dataset. Final datasets in the TERAIS project will be uploaded and publicly shared through Zenodo, IIT Dataverse, GitHub and GitLab, which provide DOIs to all publicly available uploads. The DOI of each dataset will be added to the datasets' tables reported in Section 3.2 in future updates of the document.

To facilitate datasets' findability and reusability, file-naming conventions agreed among partners will be used and clearly explained in associated "readme.txt" files. Filenames should report the project acronym, a string referring to the experimental technique/activity/objective the dataset is about, the dataset's version, and any other element useful to univocally identify the data files' content.

Meaningful search keywords will be provided in the datasets' metadata to optimise the possibility for discovery and potential re-use. Search keywords will be chosen according to a standard nomenclature or vocabulary, such as MeSH vocabulary or the ACM Computing Classification System (CCS).

**Zenodo** is compliant with the EU definition of "trusted repository". Regarding metadata, Zenodo allows extensive citation of metadata, including DOIs, authors, contributors, keywords, funding, related or alternate identifiers, and references to scientific articles or other types of publication. Zenodo is indexed in OpenAIRE Explore and registered in re3data.org and FAIRsharing.org. Zenodo is compliant with the Open Archives Initiative Protocol for Metadata Harvesting ([OAI-PMH](https://www.oai.org/)), a widely used protocol for harvesting metadata. Following OAI-PMH, the available standard formats for metadata harvesting in Zenodo are DataCite and DublinCore.

**UKBA institutional repository.** During the pre-publication phase of confidential access the datasets will be hosted on the institutional local servers of UKBA, institutional OneDrive, institutional Google Drive, with protected access. After the publication open access will be created by publishing the descriptions of the data along with any relevant metadata on the official departmental website (<https://terais.eu>), where the actual downloadable datasets will be also linked. The website and the download links will be accessible publicly and could be found using search engines.

**IIT Dataverse** (<https://dataverse.iit.it/>) is the institutional research data repository of the Istituto Italiano di Tecnologia, for both preservation and sharing of research datasets. IIT Dataverse is compliant with the EU definition of "trusted repository". It is based on the Dataverse software, developed at Harvard University ([www.dataverse.org](http://www.dataverse.org)). Dataverse assigns persistent DOIs to all data uploads for findability and it is accessible through standard HTTPS protocol. IIT Dataverse is indexed in OpenAIRE Explore and registered in re3data.org. Moreover, it provides APIs to search and access datasets, including a SWORD API. Each data upload includes 1) citation metadata, 2) optional and customizable domain-specific metadata (e.g., for Life Sciences), and 3) file-level metadata. Metadata can be exported in different standard formats (DataCite, OpenAIRE, JSON, JSON-LD, OAI, etc.) for maximal interoperability. Dataverse ensures reusability of datasets, by supporting open licences, like Creative Commons licences, and offers the possibility to customise specific data usage agreements. IIT Research Data Management service oversees dataset publication, by providing basic data curation to ensure dataset quality and FAIRness.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	Deliverable Number <b>D6.4</b>
		Version <b>2.0</b>

**Research Data Repository (RDR)** (<https://www.fdm.uni-hamburg.de/en/fdm.html>) is a central service for data archiving at the University of Hamburg. It can be used by researchers to store data securely at several locations. It also provides other features, such as versioning and a unique Digital Object Identifier (DOI) for easier citation. The data should be in a final state before storing since the repository is not intended for daily work on the data.

**GitHub and GitLab** is an Internet hosting service for software development and version control using Git. It provides the distributed version control of Git plus access control, bug tracking, software feature requests, task management, continuous integration, and wikis for each project. GitHub is commonly used to share open-source software by various research communities. Projects can be found by using the search feature on GitHub or via other search engines. GitHub supports adding keywords for each repository and a markdown README file which is displayed on the title page for each project. GitLab is a software package enabling similar functionality to GitHub, but can be hosted on an institutional server. In any case, codes uploaded in GitHub or GitLab will be also uploaded on a another repository to be provided with a Persistent Identifier (PID).

## 4.2. Making data accessible

The project complies with the Open Science and Research Data Management requirements about openness and accessibility of research data, metadata, and other outputs resulting from HE grants, as detailed in the TERAIS Grant Agreement (art. 17), and described in the HE Annotated Model Grant Agreement (Annex 5) and the HE Programme Guide. Therefore, as early as possible, research data generated during the project, which include raw and processed data as described above in Section 3.2, will be made open, with an exception of datasets that support unfinished peer-reviewed publications, patent applications, or information that cannot legally be made openly accessible (e.g. personal or sensitive data, following “as open as possible, as closed as necessary”). The last column of Table 1 - Annex 1 summarises the accessibility level foreseen for each produced child-dataset. **Datasets that support peer-reviewed scientific articles will be made open at the time of publication. Datasets (data and metadata) will be accessible in trusted repositories (see 4.1) through standardised and freely accessible HTTPS protocol.**

Along the project duration, whenever possible project documents and research data will be shared within the consortium through internal sharing service (e.g., cloud tool), user authentication will be mandated to keep confidentiality of data until required. Applied restrictions may include embargo, user authentication, or explicit acceptance of a custom data usage agreement. Collaboration with the private sector, which is encouraged by the project to increase the visibility of UKBA, may prohibit the open-access publication of child-datasets (code and/or. In such cases, the availability is subject to NDA and will be specified on a per-study basis. with no exceptions. Restricted access will be required for specific child-datasets if the data sharing would negatively impact Technology Transfer and patenting. However, in such cases the DMP will be coherently updated to provide more comprehensive motivations. An embargo of one year after the end of the project will be applied to those datasets that will not be related to any publication, in order to ensure their beneficiaries publication. In case of personal data, data will be shared only after pseudonymization and the pseudonymization mapping scheme will be available only by experimenters with user authentication.

Appropriate and comprehensive documentation (e.g., extensive and complete *readme.txt* files), together with relevant metadata (e.g., reported in a structured and machine-actionable format, such as .json), will be prepared and attached to the data before sharing. Metadata will follow DCMI, Datacite, DDI standards or similar vocabularies. Software codes needed to

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	Deliverable Number <b>D6.4</b>
		Version <b>2.0</b>

access / read / visualise the data will be made openly accessible through dedicated GitHub / GitLab repositories, which provide open access and long-term storage of source codes.

Noteworthy, **GitHub and GitLab repositories will be linked in Zenodo and in IIT Dataverse** and code releases can be assigned DOIs for findability and greater reproducibility. All metadata in Zenodo is licensed under [Creative Commons Zero](#), while the data files may be either open access and subject to a licence described in the metadata. Zenodo metadata will contain references to related materials and tools (e.g., codes) by citing and linking DOIs. By default, data and metadata in Dataverse are licensed under [Creative Commons Zero](#). Specific licences for data will be clearly specified in the metadata (e.g., CC-BY instead of CC0). Dataverse metadata will contain references to related materials and tools (e.g., codes) by citing and linking DOIs. Code released on GitHub or GitLab will contain a licence file within the code repository (CC-BY or CC0). All **data stored in Zenodo** will remain accessible for the lifetime of the repository, which is currently warranted for a minimum of 20 years. Metadata will remain available also after data is no longer available.

**Research data stored in IIT Dataverse** will remain accessible online after the end of the project with no specific deadline and until it is required. Metadata will remain available also after data is no longer available or transferred to an offline storage location (e.g., tapes). **UKBA Institutional Repositories** will remain accessible online after the end of the project with no specific deadline and until it is required. Code stored in the locally hosted **GitLab servers at UKBA** will be available after the project ends with no specific deadline. Code available on GitHub will remain available unless the operator of GitHub changes their terms of service. The data stored in the **Research Data Repository (RDR) of Universität Hamburg** is guaranteed to be stored for a minimum of 10 years. It is also possible to store the data for longer periods if chosen by the researchers. After upload, the data will not be altered nor migrated to newer formats. Upon the end of the storage duration, an extension is possible and the researchers would be contacted before deletion. However, the metadata will always remain in the repository. More information about the terms of the licence use for RDR at UHAM can be found at: <https://www.fdr.uni-hamburg.de/record/11057#.ZBsDs4DMldw>.

### 4.3. Making data interoperable

Raw data will be acquired in file formats associated with the instrument the data is generated on and can be usually read out by anyone who is in possession of the dedicated acquisition software. However, to facilitate exchange and re-use of data, datasets will be exported and stored in formats that are commonly accessible (e.g., .txt, .csv, .json), including the associated metadata and additional comments and descriptive text to aid the interpretation of the data.

To ensure the interoperability of data and metadata, standard or community-endorsed vocabularies (DCMI, Datacite, DDI standards or similar vocabularies) will be used when applicable. In case new vocabularies are generated or uncommon vocabularies are used, mappings between custom and community-endorsed vocabularies will be associated to the dataset for interdisciplinary interoperability. Abbreviations, codes, and variables' names will always be clarified at first use or defined in "readme.txt" files.

### 4.4. Increase data re-use

As mandated in art. 17 of the Grant Agreement, the digital (or physical) access to the results needed to validate the conclusions of scientific publications will be provided, including access to all the information about the research outputs/tools/instruments needed to validate publications and enable the re-use of data. The access to research data will be provided through deposition in trusted repositories, as detailed in the previous paragraphs. Whenever possible, research datasets will be available under the **Creative Commons Attribution 4.0**

 <b>TERAIS</b>	<p style="text-align: center;">Title</p> <p style="text-align: center;"><b>Data Management Plan (DMP)</b></p>	<p style="text-align: center;">Deliverable Number</p> <p style="text-align: center;"><b>D6.4</b></p>
		<p style="text-align: center;">Version</p> <p style="text-align: center;"><b>2.0</b></p>

**International (CC BY 4.0)** licence, allowing third parties to share and adapt data with no restrictions as long as attribution (i.e., citation) is provided. All Consortium partners will ensure that proper licences are attached to the deposited data to define all conditions under which the work is provided and can be reused, also in case data are not released under an open licence.

Along with data any information about methods, protocols, models, software, algorithms, workflows, simulations, electronic lab notebooks' records, etc. will be also provided and linked in the repository through the use of persistent identifiers (e.g., DOIs) (see also "Other research outputs"). For instance, source codes will be version-controlled and deposited in GitHub / GitLab and made available in open access with suitable licences (GNU GPL, MIT, etc.). Whenever useful, information about data cleaning, data quality assurance procedures, methodology, as well as variables' definitions, units of measurements, software dependencies, and, in general, data structure will be included in "readme.txt" or "readme.md" files, deposited together with data.

For data quality assurance, experiments will be conducted based on recent literature and previous pilot studies exploring problems in experimental settings, data collection, and early data analysis. When possible, video or image data will be recorded by more cameras (e.g., external cameras, robot's cameras). Tools for data collection, such as to collect human gaze and kinematic data, will be calibrated before recording data. We will follow standard and documented methods for data collection and analysis and in case of novel methodologies we will also link analysis with traditional ones.

## 5. Other outputs

In addition to the management of data, the TERAIS project partners also considered and planned for the management of other outputs that may be generated or re-used throughout their projects. **The TERAIS project, as a HE coordination and support action aimed at building capacities of a university from a Widening Country, will involve a number of specific actions (e.g., conferences, workshops, webinars) and qualitative data collection.** Therefore, it was necessary to consider management, protection and use of data in this context as well. Moreover, the questions pertaining to FAIR data above were also applied to the management of these project outputs. Table 5 provides an overview of the details on how these other outputs will be managed and shared, or made available for reuse, in line with the FAIR principles.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	<b>Deliverable Number</b> <b>D6.4</b>
		<b>Version</b> <b>2.0</b>

**Table 5.** Summary of other TERAIS project outputs with implications for data management

OUTPUT NAME	PARTNER	ORIGIN	TYPE	ACCESS TYPE	WP & TASK	ACCESSIBILITY <sup>3</sup>	DATA RETENTION
<u>Output 1:</u> Documentation on the participants in the events organised by UKBA	UKBA	Generated by the project	<b>Document</b> (.docx, .xlsx, .pdf) <b>Digital image data</b> (.tif, .jpg, .pdf, .bmp, .png) <b>Digital audiovisual data</b> (wav, .mp3, .mp4, .ogv)	<b>PHYSICAL</b> (list of participants for in person events) or <b>DIGITAL</b> (list of participants for online events, pictures/videos from the events)	<b>WP2:</b> Tasks 2.1-2.3 <b>WP7:</b> Tasks 7.1-7.3	<b>Confidential to Consortium including EC services</b> (Consortium only)	Regular period for keeping the records will be <b>5 years after the final payment</b> - in line with section 6 of the Data Sheet in the Grant Contract
<u>Output 2:</u> Documentation on the participants in the events organised by IIT	IIT	Generated by the project	<b>Document</b> (.docx, .xlsx, .pdf) <b>Digital image data</b> (.tif, .jpg, .pdf, .bmp, .png) <b>Digital audiovisual data</b> (wav, .mp3, .mp4, .ogv)	<b>PHYSICAL</b> (list of participants for in person events) or <b>DIGITAL</b> (list of participants for online events, pictures/videos from the events)	<b>WP2:</b> Tasks 2.1-2.3 <b>WP7:</b> Tasks 7.1-7.3	<b>Confidential to Consortium including EC services</b> (Consortium only)	Regular period for keeping the records will be <b>5 years after the final payment</b> - in line with section 6 of the Data Sheet in the Grant Contract
<u>Output 3:</u> Documentation on the participants in the events organised by UHAM	UHAM	Generated by the project	<b>Document</b> (.docx, .xlsx, .pdf) <b>Digital image data</b> (.tif, .jpg, .pdf, .bmp, .png) <b>Digital audiovisual data</b> (wav, .mp3, .mp4, .ogv)	<b>PHYSICAL</b> (list of participants for in person events) or <b>DIGITAL</b> (list of participants for online events, pictures/videos from the events)	<b>WP2:</b> Tasks 2.1-2.3 <b>WP7:</b> Tasks 7.1-7.3	<b>Confidential to Consortium including EC services</b> (Consortium only)	Regular period for keeping the records will be <b>5 years after the final payment</b> - in line with section 6 of the Data Sheet in the Grant Contract
<u>Output 4:</u> Recordings of the focus group discussions with UKBA staff and students	UKBA	Generated by the project	<b>Digital audio</b> (.wav, .mp3)	<b>DIGITAL</b> (audio recordings)	<b>WP4:</b> Task 4.1 <b>WP5:</b> Task 5.1	<b>Beneficiary institution access</b>	The data will be permanently deleted from the institutional Google drive after submission of deliverables D4.1 and D5.1 in <b>04/2023</b>

<sup>3</sup> In case of patenting or potential commercial exploitation, different levels of confidentiality can be foreseen (in case of Collaborative Projects):

- **Beneficiary institution access:** The disclosure of information is not provided at any level and/or any time. This option is applied when, regardless of the long-term value and scope for wider use, the dataset contains data that would lose their value if disclosed (e.g. experimental results and validation). The beneficiary who chooses to protect this information from any external access aims at patenting/exploiting it or at protecting trade secrets and must ensure confidentiality beyond the clauses agreed in the Consortium Agreement;
- **Confidential to partner:** This option is applied when, regardless of the long-term value and scope for wider use, the dataset contains personal data that cannot be protected once disclosed. These may include among others videos and images collected during the project tests;
- **Confidential to Consortium including EC services (Consortium only):** This option is applied for data containing confidential information (e.g. exploitable results) requiring IP protection, aimed at possible exploitation. In certain cases to be defined along with the development of the project, the owners may allow Open Access upon dissemination of the associated results in peer-reviewed scientific publications;
- **Open Access:** This option is applied when data has no IP restrictions and will be openly available and re-usable.

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	Deliverable Number <b>D6.4</b>
		Version <b>2.0</b>

## 6. Allocation of resources

At this preliminary stage of the project, the costs foreseen for data management are related to:

- the working time needed to set up and perform the data collection, including synchronisation of devices and analysis activities;
- the working time to setup local and shared data collection devices/servers;
- the working time needed to write documentation, metadata, etc.

In particular, all TERAIS project partners indicated that one person month for each project year will be dedicated specifically to make the data FAIR and for data management. Expenses for cloud storage used to share data and documents within the consortium will be covered by host institutions. The repository chosen for long-term data sharing and preservation (e.g., Zenodo) offers free data archiving up to 50 GB *per* dataset, which is enough given the expected data volume.

The project coordinator (UKBA) is in charge of the DMP from both the scientific and technical perspectives, as well as the release of the first version and the regular updates - in close collaboration with the partners (IIT and UHAM) who have responsibility for scientific and networking lead. The partners responsible for the generation of the research data in WP3 will also be in charge of the validation and registration of datasets and metadata, as well as backing up of the data for sharing through open access repositories, while quality control of these data is the responsibility of the relevant WP leader, supported by the Project Coordinator. Each partner should respect the policies set out in this DMP.

## 7. Data security

According to the information security risk level associated with the datasets (i.e., low and/or medium), **only IT assets approved for the corresponding risk level will be used, as detailed in the Information Security policy of each partner institution.** Laptops, workstations, and servers are managed by the institutional ICT Service departments and all procedures in place for storage and backup comply with the institutional Information security policy of the project partners (UKBA, IIT, UHAM). Where necessary, authentication with institutional login will be required to protect data confidentiality and integrity.

**UKBA** has an [Information Security policy](#) which summarises common principles of IT Security at Comenius University Bratislava as well as the user's obligation. The policy defines security as ensuring the required availability, confidentiality and integrity of 5 – information and data, but also hardware and software. Assets are all classified into four security levels (protected, standard, unprotected, and special) based on the extent of the impact of a possible security breach. Guidelines, recommendations, and processes are specified for the classification of assets, for maintaining security in general, and for responding to security incidents. The policy has been published as the UKBA [Internal regulation nr. 12/2009](#), and the Information security guidelines detailing its implementation can be found in the [Internal regulation nr. 2/2011](#).

**IIT** has an [Information Security policy](#) which classifies information and data into three levels of risk (High, Medium, Low) in relation to the protection of Confidentiality, Integrity and Availability ([Data Risk classification](#)). Consequently, the policy indicates which ICT services and systems are approved for the different levels of data risk, according to the required security standards. Therefore, to decide which ICT systems can be safely used in IIT to store,

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	Deliverable Number <b>D6.4</b>
		Version <b>2.0</b>

backup, and share research data, scientists should first of all determine which level of risk their data refer to. According to the policy, data are classified at high-risk if at least one of the following conditions are true: (1) The loss of Confidentiality, Integrity or Availability of the information can have a significant adverse impact on Intellectual Property or on the mission or reputation of the Foundation, or a significant economic or legal impact; (2) The protection of the information is required by Law; (3) The protection of the information is required by contracts or certifications of national or international standards (such as the ISO standards).

**UHAM** has an Information Security policy which is based on three main pillars: availability, integrity and confidentiality. Availability refers to having the data accessible and usable for authorised users at the desired times. Integrity means that the information needs to be complete and correct at any given time. Confidentiality is having the information in a form that is not accessible or disclosed to unauthorised third parties. More information about the data protection and information security policy that governs research data at the University of Hamburg can be found here: <https://www.fdm.uni-hamburg.de/en/fdm/datenschutz.html>.

The project is not expected to generate high-risk data. The major expected risk is connected with collecting personal data that, however, will undergo a process of pseudonymization. The pseudonymization mapping scheme will not be part of shared datasets and will be accessible only by experimenters through the authentication process. In case any dataset with high-risk data will be planned, the DMP will be coherently updated.

## 8. Legal and ethics

### 8.1. Protection of personal/special categories of data

The TERAIS project consortium fully complies with the data protection principles of lawfulness, fairness and transparency in data processing, as well as purpose limitation, data minimization, accuracy, storage limitation, integrity and confidentiality, and fully agrees that the protection of personal data is a priority, especially in a project comprising organisation of a number of events (online/offline) as well as involving human participants.

The personal data collected in the documentation in relation to the organised events will be fully in compliance with the provisions of the General Data Protection Regulation (GDPR), article 6 par. 1 point a), personal data of participants will be processed only after receiving their signed informed consent.

For the purpose of involving human participants, the **TERAIS project consortium** defined **data protection roles and responsibilities** (Data Controllers, Joint Controllers, Data Processors) and provided information and informed consent for data processing. In particular, researchers will request informed consent to disseminate such data for scientific and educational purposes in scientific publications or conferences. At the same time, informed consent can never legitimise the use of personal data in an open access environment considering that the purposes for further use of data are unknown. In such cases hence data that did not undergo a process of anonymization will be kept confidential.

**As a general rule, researchers and representatives of all partners will strive to anonymize personal research data before making them openly available, thus fulfilling both the open research data and data protection rules.** Nevertheless, complete anonymization is not always possible, especially in case of raw data such as images and videos. In these cases, researchers and representatives of the project partners will proceed with pseudonymisation of the data (when possible) and to carry out technical and organisational security measures to ensure the data confidentiality. The measures to put in

 <b>TERAIS</b>	<b>Title</b> <b>Data Management Plan (DMP)</b>	Deliverable Number <b>D6.4</b>
		Version <b>2.0</b>

place should be data/database encryption, physical security measures to prevent unauthorised data accesses, etc. For datasets containing videos, images and/or audio with personal information (faces and voices) that cannot be anonymized, only metadata will be released, while access to data will be restricted. In the case of researchers requesting access to such data, the release could be allowed only after the legal representatives of their institution sign a Data Access Agreement with the institution owning the data. To enable verification of the actual content of the dataset, a limited preview of the dataset could be released before signing the Agreement.

Finally, all the tasks involving data processing will be documented by researchers and representatives of the project partners, to guarantee an adequate level of transparency. More detailed information on the ethics-related considerations is provided in the **Ethics Reports** (deliverables D1.2 and D1.3 due in March 2023 and February 2024, respectively).

## 8.2 Ethical issues

### 8.2.1 Ethical issues (research data involving experiments with humans)

The TERAIS project consortium acknowledges that the governance of the ethical issues in projects involving experiments with humans had to be taken into great account. In particular, the following issues are considered as priorities:

- Formalise procedures to identify/recruit all kinds of research participants (including children and/or minors in specific cases).
- Provide information and informed consent to the research participants (including all the relevant information regarding the protection of personal data as well as information related to the incidental/unexpected findings policy).
- Adopt adequate technical and organisational measures to safeguard the rights and freedoms of the data subjects/research participants (e.g. data processing, storage and retention, access procedures to the data, written instructions to the authorised persons to process personal data, security measures such as anonymisation, encryption or pseudonymisation etc.).

Furthermore, in the case of children and/or minors participation in the project, the TERAIS project consortium (namely IIT) provides a governance enforcement, with reference to:

- Require specific informed consent/assent for the children involved in the project, and define the manner how parental/legal carer consent will be ensured for the participation of the infants and minors in the project.
- Verify if it is necessary to obtain prior clearance from the relevant authorities according to the national law before starting any research involving children.

### 8.2.2 Ethical issues (research data involving experiments with animals)

No experiments with animals will be conducted.

## 9. Other issues

No use of other national/funder/sectorial/departmental procedures for data management is foreseen in the TERAIS project.
